

Common UK bumblebees

The UK has 24 species of bumblebee, some common and some rare! These are the eight most common bumblebees you are most likely to see.

Use this poster to have a go at identifying your local bumblebees. Like all insects, their bodies have three main segments: the head, thorax (upper body) and abdomen (lower body). Looking at the tail colour is the best place to start, then the colour patterns on the rest of the body.

For a step-by-step guide to identifying bumblebees, visit bumblebeeconservation.org

Heath bumblebee (Bombus jonellus)

Three yellow stripes and a white tail, similar to Garden bumblebees, but smaller with a short tongue and round face. Males have bright yellow

Queen/Worker/Male

Tree bumblebee (Bombus hypnorum)

Recent immigrant from France. Unique brown, black and white colour pattern. This bumblebee has spread rapidly and is now widespread in England, Wales and Scotland.

Queen/Worker/Male

Buff-tailed bumblebee (Bombus terrestris)

Queens and males usually have buff tails but workers' tails are largely white, usually with a hint of buff at the front margin. Yellow bands slightly darker/dirtier than in the White-tailed.

Queen Worker

Common carder bee (Bombus pascuorum)

The only common brown bumblebee. Some forms have a very dark abdomen, but others are very light and similar to rarer carder bees.

Photo: Bumblebee worker

White-tailed bumblebee (Bombus lucorum)

Similar to Buff-tailed bumblebee but tail always pure white and bands brighter yellow. Males have yellow faces and often extra yellow bands.

Male

Queen

Early bumblebee (Bombus pratorum)

A common small bee with an orangey-red tail. Has one or two yellow bands and males have a vellow face. Rarely seen after July.
